DETAILED ACTION

Allowable Subject Matter

1. Claims 4 and 6-12 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art, individually or in combination, fails to disclose, teach or suggest an angular rate sensing means affixed to the base plate for sensing at least one inclination and rotation of the base plate upon detachment of the detachable joint from the base plate and producing and electrical control signal and a control circuit coupled to the servo motors and responsive to the electrical control signal for de-energizing the servo motors. The closest prior art, Sprenger et al, does disclose being able to sense if the slide leaves the allowed rotational range and if so, producing an emergency stop. Sprenger et al, and the other prior art, however, fails to disclose having the angular rate sensing means affixed to the base plate to sense upon detachment of the detachable joint from the base plate and send a control signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
